Products are grouped into three generic families based on the type of measurement. Surface, form and texture products consist of contact and non-contact instruments for the measurement of surface finish, form and contour of components in both 2D and 3D. Roundness instruments are used for measuring circular geometries such as roundness, concentricity, runout, cylindricity, coaxiality and other parameters. Alignment instruments are electro-optical instruments for alignment, flatness, angle, squareness, parallelism, straightness and twist measurement.
